Syed Shayan Arshad

AI / Machine Learning Engineer

+92 3334412941 : syedshayanarshad.1@gmail.com [in]: www.linkedin.com/in/syedshayanarshad/

SUMMARY

I am a motivated BS Computer Science student specializing in Artificial Intelligence, Machine Learning, and Deep Learning. Experienced in building end-to-end ML pipelines including data preprocessing, feature engineering, model training, evaluation, and deployment. Skilled in deep learning architectures such as CNN, RNN, LSTM, GRU, and attention mechanisms. Experienced in deploying AI applications using Streamlit and Gradio and supporting AI products with modern web technologies such as React and Next.js.

SKILLS

Programming: Python, JavaScript, SQL, C#, C++
Machine Learning: Regression, Classification, Clustering, Feature Engineering, Model Evaluation
Deep Learning: ANN, CNN, RNN, LSTM, GRU, Attention Mechanisms, Transformers
Libraries/Frameworks: Pandas, NumPy, Matplotlib, Seaborn, Scikit-learn, Keras, PySpark, Beautiful Soup
Deployment: Streamlit, Gradio, Flask
Web Development (Support): React.js, Next.js, Tailwind CSS, Prisma, MySQL, MongoDB

EDUCATION

BS Computer Science (CGPA: 3.66/4.0) — UET Lahore (2023–2027)
ICS (Marks: 968/1100) — Govt. Islamia College Civil Lines Lahore (2021-2023)
Matric (Marks: 1050/1100) — Govt. Public High School Nainsukh Shahdara (2019-2021)

EXPERIENCE

IT Support, Intern — NIMIR Resins Limited (*June 2025 – August 2025*)

- Provided technical support for CCTV systems, printers, scanners, and end-user devices
- Installed Windows, configured software & SAP HANA, and handled basic network troubleshooting

Frontend Development, Intern — NIMIR Group of Companies (*June 2024 – August 2024*)

- Developed responsive web interfaces like eCommerce app using React.js, Next.js, and Tailwind
- Learned SAP ERP & ABAP fundamentals and created Python automation scripts

PROJECTS

Plant Disease Classification (Deep Learning + Deployment)

- Developed a CNN model using VGG16 + Inception for plant disease detection.
- Implemented Grad-CAM interpretability and deployed the model with Streamlit.

Crypto Volatility Forecaster (Time Series + Streamlit Hugging Face)

- Built a time-series system predicting crypto volatility using LSTM, GRU, and RNN models.
- Deployed a Streamlit platform with live market APIs, and volatility-based trading signals.

Movie Recommendation System (PySpark + ML Deployment)

- Built a scalable recommendation engine using PySpark ALS collaborative filtering.
- Developed an interactive user interface using Gradio.

AQI Prediction (Machine Learning + Data Analysis)

- Analyzed 10k+ air quality records and trained models including SVM, KNN, Random Forest.
- Applied PCA and K-Means clustering for pattern discovery.

Inventory Management System (Full Stack Support Project)

- Built a full-stack web application using Next.js, Prisma, and MySQL.
- Implemented stock tracking, purchase/sales management, and reporting dashboard.
